

GITHUB PORTFOLIO

CEDRIC ARIÑO
BS COMPUTER SCIENCE 2-B

ABOUT THIS PRESENTATION

- The purpose of this presentation is to walk through my outputs for this course and reflect on the skills I developed throughout the semester. This includes presentation design, visual communication using Canva, basic UI and branding principles, and organizing outputs using GitHub.
- Throughout the course, I learned how to communicate ideas more clearly through visuals, apply consistent design principles, and document creative and technical work in a more professional way.

LABORATORY 1

Skills & Career Goals

Key Skills

- Proficient in Python, Java, and C++
- Experienced in assembling and programming Arduino-based electronics and circuits.

Career Goals

- Launch a technology startup and actively work on scaling its products and operations
- Become the CEO of a leading technology brand and drive innovation within the industry

Achievements

Regional Youth Learning Exchange on
Climate Change and Water,
Sanitation, and Hygiene (WASH) 2023
Held on May 3-6, 2024 in Jakarta

National Science, Technology, and
Innovation Week (NSTW) 2023
Held on November 22-26, 2023 at the
Bali Convention Center, Province of

Teachers Startup Weekend ASTRA
Borneo 2024
Held on September 27-29, 2024 at the
Ateneo de Surabaja University, Borneo City

- For Laboratory 1, the task was to create a short personal introduction presentation using Canva. The goal was to apply basic presentation design principles such as contrast, alignment, hierarchy, and white space, while also learning how to use Canva effectively.
- My approach focused on keeping the design clean and consistent. The design principle I found most useful here was repetition, because using the same colors, fonts, and layout across slides helped create visual unity and made the presentation feel more organized and professional.
- I used Canva's drag-and-drop interface to arrange elements, which made the design process intuitive. The most time-consuming part was modifying templates to fit my content while still maintaining consistency.
- Through this activity, I learned that organizing information clearly is essential for effective visual communication. When content is structured properly, the audience can understand the message more easily.

LABORATORY 2

- For Laboratory 2, we were tasked with creating a complete personal branding kit and setting up a GitHub profile to showcase these assets. This activity focused on building a professional online presence.
- My branding was inspired by my personality. I chose a clean and minimal design because it reflects how I approach my work: organized and focused. I selected a dark blue color palette since it conveys calmness, reliability, and professionalism.
- The most challenging part of this activity was creating the logo. Translating my personality into a visual form required careful decision-making, which made the process more deliberate.
- All branding assets were uploaded to my GitHub repository, and this branding will continue to be used in future projects to maintain consistency across my work.

LABORATORY 3

LEARNING UI/UX DESIGN

Designing with intention and focus on clarity.
Currently building skills in layout, color theory, and
visual hierarchy using Canva.

Growing one design at a time.

A TECHNOLOGICAL REVOLUTION

JOIN US FOR AN ENGAGING WEBINAR WHERE INDUSTRY
EXPERTS DISCUSS HOW ARTIFICIAL INTELLIGENCE IS
TRANSFORMING INDUSTRIES, EDUCATION, AND DAILY
ROUTINES. GAIN INSIGHTS, ASK QUESTIONS, AND EXPLORE
EMERGING OPPORTUNITIES.

- For Laboratory 3, we designed multiple brand assets such as a resume header, personal logo, tagline, color palette, typography set, and social media graphics. These assets were then uploaded to GitHub, and we customized our GitHub Profile README to serve as a digital portfolio.
- Among the designs, the social media post was the easiest to create due to its smaller size and simpler layout. Across all designs, I consistently applied the same colors, fonts, and logo placement to maintain a cohesive visual identity.
- To ensure readability and hierarchy, I positioned headings at the top, placed the main message in the center, and clearly highlighted the call-to-action.
- From this activity, I learned how important consistent branding is in creating professional and recognizable visual content, especially for online platforms.

LABORATORY 4

- For Laboratory 4, the task was to create a one-page infographic that visualizes a real-world problem and to write a short project documentation report proposing a tech-enabled solution.
- The problem I chose focused on individuals who lack the time to visit laundromats regularly and end up settling for poor-quality services out of convenience. Common issues included unclean clothes, missing items, and dissatisfaction with detergents.
- In the infographic, I emphasized clarity, minimal text, and visual flow to clearly communicate the problem, its causes, and its impact. Tools such as icons, short labels, and grouped sections were used to make the information easy to scan and understand.
- For the proposed solution, I designed a laundry delivery application that allows users to choose from multiple laundromats, customize their laundry preferences, schedule pickup and delivery, and view transparent pricing. This solution demonstrates how technology can improve convenience, accountability, and service quality.
- Both the infographic and documentation were created using Canva and organized as part of my course outputs.

THANK YOU!!
